Office Action Summany	10/764,268	ZHU, QUING			
Office Action Summary	Examiner	Art Unit			
	Jonathan G. Cwern	3737			
The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Fäilure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).					
Status					
1)⊠ Responsive to communication(s) filed on <u>30 A</u>	ıgust 2004.				
2a) This action is <b>FINAL</b> . 2b) ⊠ This	This action is <b>FINAL</b> . 2b)⊠ This action is non-final.				
3) Since this application is in condition for allowar	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is				
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.					
Disposition of Claims					
<ul> <li>4)  Claim(s) 1-17 is/are pending in the application.</li> <li>4a) Of the above claim(s) is/are withdrawn from consideration.</li> <li>5)  Claim(s) is/are allowed.</li> <li>6)  Claim(s) 1-17 is/are rejected.</li> <li>7)  Claim(s) is/are objected to.</li> <li>8)  Claim(s) are subject to restriction and/or election requirement.</li> </ul>					
Application Papers					
<ul> <li>9) ☐ The specification is objected to by the Examiner.</li> <li>10) ☑ The drawing(s) filed on 23 January 2004 is/are: a) ☑ accepted or b) ☐ objected to by the Examiner.  Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).</li> <li>11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.</li> </ul>					
Priority under 35 U.S.C. § 119

## **DETAILED ACTION**

This office action is in response to the application filed on 1/23/04.

Currently, claims 1-17 are pending.

## Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 8/30/04 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 10/764,268

Art Unit: 3737

4. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhu (US 6264610, patented: 7/24/01) in view of Bick et al. (US 6185320, patented: 2/6/01).

Page 3

5. Zhu shows, with respect to claims 1, 10, and 11, a method for imaging a lesion using combined near infrared diffusive light and ultrasound (abstract), the method comprising: scanning a subject with ultrasound waves to obtain ultrasound images of a scanned volume (column 2, lines 1-16), the scanned volume including the lesion; scanning the subject with near infrared light to obtain optical measurements of the scanned volume (column 2, lines 1-16); and reconstructing from the optical measurements an optical image of at least a portion of the scanned volume, the reconstructing being performed using different voxel sizes for optical measurements corresponding to the lesion region and optical measurements corresponding to the background region (the optical measurements are used in well-known image reconstruction schemes, column 6, lines 17-21); with respect to claims 2 and 10. measuring parameters of the lesion using the ultrasound images to provide values indicative of the parameters; and reconstructing the optical image again using the values (target structure information is used for optical reconstruction algorithms, column 7, lines 8-13); with respect to claims 3 and 12, the optical measurements include amplitude and phase (column 6, lines 12-17); with respect to claims 4 and 13, determining absorption and scattering coefficients at slice depths in the scanned volume (column 6, lines 18-20); with respect to claims 5 and 14, the optical image indicates at least one of wavelength-dependent absorption associated with the lesion and hemoglobin concentration associated with the lesion (oxygenation and blood volume

Application/Control Number: 10/764,268

Art Unit: 3737

are detected, column 7, lines 4-7); and with respect to claim 9, wherein the reconstructing the optical image again further includes: controlling the total number of voxel sizes (the number of unknowns and the number of measured parameters are kept approximately the same, column 6, lines 30-34).

Zhu fails to show, with respect to claims 1 and 10, segmenting the scanned volume into a lesion region including the lesion and a background region absent the lesion using the ultrasound images; with respect to claims 6 and 15, the values indicate lesion location in the scanned volume and size of the lesion; with respect to claims 7 and 16, increasing a value indicating lesion size to account for possible inaccuracies of an initial lesion size estimate; and with respect to claims 8 and 17, the value indicating lesion size is a value indicating a diameter of the lesion.

Bick teaches, with respect to claims 1 and 10, segmenting the scanned volume into a lesion region including the lesion and a background region absent the lesion using the ultrasound images (abstract); with respect to claims 6 and 15, the values indicate lesion location in the scanned volume (x-y position of the lesion represents the location, column 8, line 41) and size of the lesion (size, column 8, line 33); with respect to claims 7 and 16, increasing a value indicating lesion size (the size of the template can be varied, column 7, line 67 through column 8, line 1) to account for possible inaccuracies of an initial lesion size estimate (a larger template is used to make sure that the entire lesion is covered and it is then minimized to find the optimal size, column 8, lines 38-45); and with respect to claims 8 and 17, the value indicating lesion size is a value indicating a diameter of the lesion (diameter, column 8, line 33).

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have combined the image segmentation technique as taught by Bick, in the device of Zhu, with the motivation that segmenting an image will eliminate unnecessary components of the image (such as healthy tissue), so that the important components of the image can be focused on (such as a lesion), increasing the chance of detecting cancer in the patient. There is a reasonable expectation of success to combine these references because both are related to imaging to detect breast lesions.

## Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kupinski et al. (US 6138045) teaches a method and system for segmenting and classifying lesions.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan G. Cwern whose telephone number is 571-270-1560. The examiner can normally be reached on Monday through Friday 9:30AM - 6:00PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 571-272-1670. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
